## **DETAILED ACTION**

### ***Continued Prosecution Application***

1. The request filed on 02/25/03 (paper # 28) for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) based on parent Application No. 08/953,154 is acceptable and a CPA has been established. An action on the CPA follows.

### ***Claim Rejections – 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Art Unit: 2835

3. Claims 1-4, 13-18, 20, and 21, as best understood, are rejected under 35 U.S.C. 102(e) as being anticipated by US/5,835,732 to Kikinis et al., (Kikinis).

Regarding claims 1 and 17, Kikinis disclosed (Fig. 1-6 and 20) a keyboard (60, 151) comprising: a housing having substantially a form factor of personal computer keyboard (Fig. 20); a plurality of keys disposed within the housing; a communication link (26') disposed within the housing (Fig. 6), wherein the communication link (26') is capable of communicating with a computer (66); and,

a connector (14'') operatively coupled to the communication link (26'), said connector disposed within the housing and receptive to a corresponding connector (14) of a PDA device (10) such that the PDA device (10) communicates with the computer over the communication link (26'') when the connectors (14 and 14') are coupled, (column 4, lines 46+).

Regarding claim 20, Kikinis further disclosed that said PDA device (10) has a touch screen (16), (column 4, lines 56+).

Regarding claims 2-4, 18, and 21, Kikinis disclosed that the housing has a plurality of surfaces (an end surface within the docking bay into which the connector (14') is disposed) defining a cradle cavity (i.e. a docking bay) shaped so that the device (10) fits into the cavity such that at least one surface (front surface) of the device (10) is exposed, (Fig. 5).

Regarding claim 5, Kikinis disclosed that top and bottom surfaces of the device (10) are flush with the corresponding surfaces of the housing, (inherited in the structure, since the device (10) is inserted in a docking bay).

Regarding claims 6-8, and 13, Kikinis disclosed that the communication link may comprise serial cable or infrared (wireless) transceiver (column 1, lines 37+).

Art Unit: 2835

Regarding claims 9, 10, and 15, Kikinis disclosed a power source operatively coupled to the connector (14') of the keyboard to recharge a battery (15) of the device (10), (column 6, lines 3+).

Regarding claim 11, Kikinis disclosed that said device (10) is a personal digital assistant (PDA) operable in a docking mode or stand-alone mode (column 4, lines 46+; column 6, lines 3+).

Regarding claim 14, Kikinis disclosed that said device (10) has a touch screen (16) having at least one virtual key (column 4, lines 56+).

Regarding claim 16, Kikinis disclosed that said device (10) is a telephone handset, (column 14, lines 27+).
